Stop - Sportsmen - Look

The Two Photos Shown Below represent two of the greatest health-giving recreations and sports of outdoor America, but - - there would be neither ducks nor fish were it not for the aquatic plants and natural foods growing here.
Giant Wild Rice

FAVORITE FOOD OF
Mallards! Black Ducks! Widgeon, etc.!

You can attract them to your waters next fall, if you plant Wild Rice seed NOW. These ducks will fly hundreds of miles out of their direct line of flight in search of the ripened grains of Wild Rice.

Wild Rice has always been the favorite food of these marsh ducks, and today thousands of them crowd the Wild Rice marshes as drainage and civilization destroy many of their old haunts.

Plants of the Wild Rice grow quite high, and aside from supplying food and cover for the ducks, provide blinds for the hunter.

Wild Rice grows in slow running, fresh water streams, lakes or ponds having a permanent outlet. It should be planted on a mud bottom in sunny, sheltered bays in from 6 inches to 3 feet of water.

TERRELL'S GIANT WILD RICE is larger than the ordinary Wild Rice, therefore producing more food per acre than the ordinary variety.

60 lbs. of Wild Rice Seed will plant an acre.

PRICES

$ .80 per lb. in small lots.
1.00 per lb. postpaid.
65 per lb. in lots of 25 lbs. or more.
60 per lb. in lots of 100 lbs. or more.
The one sure way of attracting more diving ducks, such as Canvasbacks, Redheads and Bluebills, is to plant Wild Celery. These ducks love to feast upon the tender white roots of this plant. Diving ducks do not feed upon Wild Rice to any great extent; and, if Wild Celery is planted as a supplement to Wild Rice, you can attract the kinds of ducks that otherwise would not stop on your waters.

FISHING GREATLY IMPROVED.

The leaves of the Wild Celery support an abundance of insect life upon which the small fry feed. The dense growth also affords cover and protection for the fry which assures more young fish reaching maturity; and this in turn means better fishing.

Wild Celery grows under the same conditions as required for Wild Rice, except that the depth of water ranges from two to eight feet.

Wild Celery winter-buds can be planted now and until June 1st. Plant 1,000 winter-buds per acre.

5,000 or more $33 per 1,000.
1,000, $35
100, $5.
Wapato Duck Potato

Canada Geese and Wild Ducks of all kinds are fond of the seeds and tubers which the Duck Potato produces in great abundance.

Wapato Duck Potato furnishes food over a long period and late into the fall. Planted in addition to Wild Rice and Wild Celery, it will hold the wild waterfowl for a longer interval.

Tubers of Wapato Duck Potato planted now will provide food for the ducks and geese next fall. The plants spread rapidly; an acre planted now, in a period of a few years, will double the area.

Wapato Duck Potato grows in waters from one inch to one foot in depth, preferably on a mud bottom. It is a very hardy plant and will grow in almost any waters except those which are salty or contain alkali.

These plants are very attractive and widely used for ornamental purposes, as well as for attracting ducks.

1,200 Wapato Duck Potato tubers will plant an acre.
5,000 or more tubers, $33 per 1,000.
1,000, $32
100, $5.

INTERESTING REMARKS
of HON. HARRY B. HAWES
of Missouri
In House of Representatives
January 24, 1924.

Our forefathers came with the Bible in one hand and the rifle in the other.
Some of their descendants have lost the rifle; some the Bible; some both the Bible and the rifle.
Let us restore the confidence and strength that knowledge of the rifle brings. Let us restore the spiritual strength the Bible gives.
Let us help to bring back both by the purchase of a piece of the big "outdoors," where strong men and spiritual power find the best nourishment.
When we lose our "pep," when good food tastes bad, when friends do not satisfy, when life becomes a bore, when music seems out of tune, when the old dog annoys, when the doctor fails, and the good wife irritates, there is but one remedy for the "run down," and it is found in the forests or on the streams in the big "outdoors."
There we go to church and worship God by conversing with the things He made, listening to sermons from rocks and trees, choir music from the birds.
If you need a fresh start and want to lose the "run-down" feeling and get back your "pep," go fishing.
